

**Day 1: Quadratic Transformations (H & K values)**

The **parent function** of a function is the simplest form of a function. The parent function for a quadratic function is  $y = x^2$  or  $f(x) = x^2$ . Graph the parent function below.

x	x <sup>2</sup>
-3	
-2	
-1	
0	
1	
2	
3	

As you can see, the graph of a quadratic function is very different than the graph of a linear function.

The U-shaped graph of a quadratic function is called a \_\_\_\_\_.

The highest or lowest point on a parabola is called the \_\_\_\_\_.

One other characteristic of a quadratic equation is that one of the terms is always \_\_\_\_\_.

There are several different forms a quadratic function can be written in, but the one we are going to work with for today is called **vertex form**. In the following explorations below, you are going to learn the effect of a, h, and k values have on the parent graph.

**Vertex Form**

$$f(x) = a(x-h)^2 + k$$

Variable	Summary of the Effects of the Transformations				
<b>a</b>	reflect =	Up: $a > 0$	width	Stretch: $a > 1$ <sup>skinny</sup>	
		Down: $a < 0$		Shrink: $a < 1$ <sup>wide</sup>	
<b>h</b>	shifts left/right	Left: $h = \text{neg}$	$y = (x+h)^2$ $y = (x-h)^2$	<i>looks like</i>	
		Right: $h = \text{pos}$			
<b>k</b>	shifts $\uparrow / \downarrow$	Up: $k = +$			
		Down: $k = -$			

Vertex:  $(h, k)$   
 $\uparrow$  x-coord  $\uparrow$  y-coord.

Algebra 1

Unit 8: Quadratic Functions

Notes

**Slide 5 ~ The A Value, part 1 ~  $y = ax^2$**

- a. What does the a value do to the blue graph? \_\_\_\_\_
- b. When a is greater than 1, what does it do to the blue graph? \_\_\_\_\_
- c. When a is between 0 and 1, what does it do to the blue graph? \_\_\_\_\_
- d. If there is only an a value, what will the vertex always be? \_\_\_\_\_

**Slide 6 ~ The A Value, part 2 ~  $y = ax^2$**

- a. What does the a value do to the blue graph? \_\_\_\_\_
- b. When a is less than 1, what does it do to the blue graph? \_\_\_\_\_

**Practice:** Describe the transformations from the given function to the transformed function.  $y = ax^2$

- a.  $f(x) = x^2 \rightarrow f(x) = 4x^2$   
 $a = 4$   
 stretches by 4
- b.  $y = x^2 \rightarrow y = \frac{1}{4}x^2$   
 $a = \frac{1}{4}$   
 shrink by  $\frac{1}{4}$
- c.  $f(x) \rightarrow 6f(x)$   
 $a = 6$   
 stretch by 6
- d.  $f(x) = x^2 \rightarrow f(x) = -x^2$   
 $a = -1$   
 reflects
- f.  $y = x^2 \rightarrow y = -\frac{1}{2}x^2$   
 $a = -\frac{1}{2}$   
 shrink by  $\frac{1}{2}$ ; reflect
- g.  $f(x) \rightarrow (-4)f(x)$   
 $a = -4$   
 reflect stretch by 4

**Putting It All Together with A, H, and K**

**Practice:** Given the equations below, name the vertex and describe the transformations:

Equation	Transformations	Vertex
1. $y = -(x - 4)^2 + 7$	$a = -1 \rightarrow$ reflects $h = +4 \rightarrow$ right 4 $k = +7 \rightarrow$ up 7	$(4, 7)$
2. $y = 2(x + 2)^2 + 5$	$a = 2 \rightarrow$ stretch by 2 $h = -2 \rightarrow$ left 2 $k = +5 \rightarrow$ up 5	$(-2, 5)$
3. $y = \frac{1}{2}(x - 3)^2 - 8$	$a = \frac{1}{2} \rightarrow$ shrink by $\frac{1}{2}$ $h = +3 \rightarrow$ right 3 $k = -8 \rightarrow$ down 8	$(3, -8)$

**Practice:** Create an equation to represent the following transformations:

$y = a(x - h)^2 + k$

- a. Shifted down 4 units, right 1 unit, and reflected across the x-axis

$k = -4$     $h = +1$     $a = -1$     $y = -(x - 1)^2 - 4$

- b. Shifted up 6 units, reflected across the x-axis, and stretch by a factor of 3

$k = +6$     $a = -3$     $y = -3(x)^2 + 6$

- c. Shifted up 2 units, left 4 units, reflected across the x-axis, and shrunk by a factor of  $\frac{3}{4}$

$k = +2$     $h = -4$     $a = -\frac{3}{4}$     $y = -\frac{3}{4}(x + 4)^2 + 2$

**Day 2 - Characteristics of Quadratics**

One key component to fully understanding quadratic functions is to be able to describe characteristics of the graph and its equation.

**Domain and Range**

Domain		
<b>Define:</b> All possible values of x	<b>Think:</b> How far <u>left</u> to <u>right</u> does the graph go? <i>(Red arrows pointing left and right)</i>	<b>Write:</b> Smallest $x \leq x \leq$ Biggest x *use < if the circles are open*
Range		
<b>Define:</b> All possible values of y	<b>Think:</b> How far <u>down</u> to how far <u>up</u> does the graph go? <i>(Green arrows pointing down and up)</i>	<b>Write:</b> $y \leq$ highest y value (opens down) $y \geq$ lowest y value (opens up)

Graph 1

Domain:  $-\infty < x < \infty$   $\mathbb{R}$   
Range:  $y \geq -4$

Graph 2

Domain:  $\mathbb{R}$   
Range:  $y \leq 4$

Graph 3

Domain:  $\mathbb{R}$   
Range:  $y \geq -4$

Graph 4

Domain:  $\mathbb{R}$   
Range:  $y \leq 3$

Zeros and Intercepts

Y-Intercept		
<b>Define:</b> Point where the graph crosses the y-axis	<b>Think:</b> At what coordinate point does the graph cross the y-axis?	<b>Write:</b> (0, b)
X-Intercept		
<b>Define:</b> Point where the graph crosses the x-axis	<b>Think:</b> At what coordinate point does the graph cross the x-axis?	<b>Write:</b> (a, 0)
Zero		
<b>Define:</b> Where the function (y-value) equals 0	<b>Think:</b> At what x-value does the graph cross the x-axis?	<b>Write:</b> $x = a$

Graph 1

X-intercepts:  $(-1, 0)$   $(3, 0)$   
 Y-intercept:  $(0, -3)$   
 Zeros:  $x = -1, 3$

Graph 2

X-intercepts:  $(-3, 0)$   $(1, 0)$   
 Y-intercept:  $(0, 3)$   
 Zeros:  $x = -3, 1$   
 $y = -(x + 1)^2 + 4$

Graph 3

X-intercepts: \_\_\_\_\_  
 Y-intercept: \_\_\_\_\_  
 Zeros: \_\_\_\_\_

Graph 4

X-intercepts: \_\_\_\_\_  
 Y-intercept: \_\_\_\_\_  
 Zeros: \_\_\_\_\_

**Vertex & Axis of Symmetry**

Vertex		
<b>Define:</b> Highest or lowest point or peak of a parabola	<b>Think:</b> What is my highest or lowest point on my graph?	<b>Write:</b> Name the point (h, k)
Axis of Symmetry		
<b>Define:</b> The vertical line that divides the parabola into mirror images and runs through the vertex	<b>Think:</b> What imaginary, vertical line would make the parabola symmetrical?	<b>Write:</b> $x = h$ (x value of the vertex)

Graph 1

Vertex:  $(1, -4)$   
Axis of Symmetry:  $x = 1$

Graph 2

Vertex:  $(-1, 4)$   
Axis of Symmetry:  $x = -1$

Graph 3

Vertex:  $(-2, -4)$   
Axis of Symmetry:  $x = -2$

Graph 4

Vertex:  $(2, 3)$   
Axis of Symmetry:  $x = 2$

**Extrema**

<b>Maximum</b>		
<b>Define:</b> Highest point or peak of a function.	<b>Think:</b> What is my highest point on my graph?	<b>Write:</b> $y = k$ (y-value of the vertex)
<b>Minimum</b>		
<b>Define:</b> Lowest point or valley of a function.	<b>Think:</b> What is the lowest point on my graph?	<b>Write:</b> $y = k$ (y-value of the vertex)

**Graph 1**

Extrema: *min*  
Min/Max Value:  $y = -4$

**Graph 2**

Extrema: *max*  
Min/Max Value:  $y = 4$

**Graph 3**

Extrema: *min*  
Min/Max Value:  $y = -4$

**Graph 4**

Extrema: *max*  
Min/Max Value:  $y = 3$

End Behavior

End Behavior

Define:

Behavior of the ends of the function (what happens to the y-values or  $f(x)$ ) as  $x$  approaches positive or negative infinity. The arrows indicate the function goes on forever so we want to know where those ends go.

<p><b>Think:</b> As <math>x</math> goes to the left (negative infinity), what direction does the left arrow go? <math>L = -\infty</math>, <math>R = +\infty</math></p>	<p><b>Write:</b> As <math>x \rightarrow -\infty</math>, <math>f(x) \rightarrow</math> ____</p>
<p><b>Think:</b> As <math>x</math> goes to the right (positive infinity), what direction does the right arrow go? <math>R = +\infty</math></p>	<p><b>Write:</b> As <math>x \rightarrow \infty</math>, <math>f(x) \rightarrow</math> ____</p>

Graph 1

As  $x \rightarrow -\infty$ ,  $f(x) \rightarrow +\infty$ .  
As  $x \rightarrow \infty$ ,  $f(x) \rightarrow +\infty$ .

Graph 2

As  $x \rightarrow -\infty$ ,  $f(x) \rightarrow -\infty$ .  
As  $x \rightarrow \infty$ ,  $f(x) \rightarrow -\infty$ .

Graph 3

As  $x \rightarrow -\infty$ ,  $f(x) \rightarrow +\infty$ .  
As  $x \rightarrow \infty$ ,  $f(x) \rightarrow +\infty$ .

Graph 4

As  $x \rightarrow -\infty$ ,  $f(x) \rightarrow -\infty$ .  
As  $x \rightarrow \infty$ ,  $f(x) \rightarrow -\infty$ .
