Unit 9 - Quadratic Equations

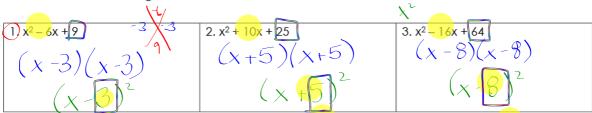

b. Are there two possible answers to part (a)? Why or why not?

### Day 6 – Solving by Completing the Square

Some trinomials form special patterns that can easily allow you to factor the quadratic equation. We will look at two special cases:

Review: Factor the following trinomials.

(a) How does the constant term in the binomial relate to the b term in the trinomial?

(b) How does the constant term in the binomial relate to the c term in the trinomial?

Problems 1-3 are called **Perfect Square Trinomials**. These trinomials are called perfect square trinomials because when they are in their factored form, they are a binomial squared. An example would be  $x^2 + 12x + 36$ . Its factored form is  $(x + 6)^2$ , which is a binomial squared.

But what if you were not given the c term of a trinomial? Let's see if you can find the missing c term!

Directions: Complete the square for the following expressions. Then factor your expression.

$$\frac{b}{2} = \frac{a \cdot x^2 + a \cdot x + \frac{1}{2} + 2 \cdot 1^2}{2^2 = 4}$$

b. 
$$x^2 + 8x + 16 = (x + 4)^2$$

b. 
$$x^{2}+8x+1b=(x+4)^{2}$$
 c.  $x^{2}+6x+9=(x+3)^{2}$   $\frac{8}{2}=4$   $4^{2}=16$   $\frac{6}{2}=3$   $3^{2}=9$ 

$$d x^2 + 14x + = 1$$

$$e_{x}x^{2}-2x+=0$$

d. 
$$x^2 + 14x + \underline{\hspace{1cm}} = ($$
  $)^2$  e.  $x^2 - 2x + \underline{\hspace{1cm}} = ($   $)^2$   $( x^2 - 18x + \underline{ 9}) = ($   $( x - \gamma)^2$ 

h. 
$$x^2 - 20x + 100 = (X - 10)^2$$

$$\frac{1}{2} = 9 (-9) = 8$$

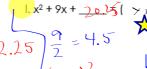

g. 
$$x^2 - 12x + \underline{\hspace{1cm}} = ( )^2$$
 h.  $x^2 - 20x + \underline{/D0} = ( \frac{1}{2} )^2$ 

$$\frac{-20}{2} = -10 \quad (-10)^{2} = 100 \quad \frac{5}{2} = 2.5 \quad (2.5)^{2} = 156 \text{ er}$$

$$\frac{-20}{2} = -10 \quad (-10)^{2} = 100 \quad \frac{5}{2} = 2.5 \quad (2.5)^{2} = 156 \text{ er}$$

$$\frac{-7}{2} = -3.5 \quad 15(-3.5)^{2} = 12.25 \quad \frac{9}{2} = 4.5$$

j. 
$$x^2 - 3x + \underline{\hspace{1cm}} = ($$
  $)^2$  k.  $x^2 (7x) + 12.25 = (x)$   $\frac{-7}{2} = -3.5$  15

Unit 9 - Quadratic Equations

Notes

## Solving equations via "COMPLETING THE SQUARE":

#### The Equation:

STEP 1: move constant term to the other side)

STEP 2: make the left hand side a perfect square trinomial by adding  $\left(\frac{b}{2}\right)^2$  to **both** sides

STEP 3: factor the left side, simplify the right side

STEP 4: solve by finding square roots

$x^{2} + 6x$ $x^{2} + 6x$ $x^{2} + 6x$ $x^{2} + 6x$	y + 2 = 0 y + 2 = -2 y + 9 = -2 + 9	<u>le</u> = 3
(x+3)	(x+3) = 7	$(3)^2 = 9$
$(x + 3)^2$	- 7 IVaulya camplata	d the square time to sel

 $(x+3)^2 = 7$  (You've completed the square – time to solve!)

$$\sqrt{(x+3)^2} = \sqrt{7}$$

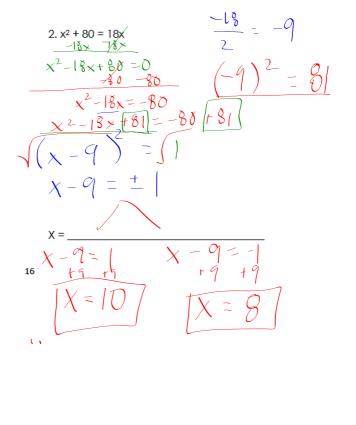

$$x+3 = \sqrt{7}$$
 and  $x+3 = -\sqrt{7}$ 

$$x = -3 + \sqrt{7}$$
 and  $x = -3 - \sqrt{7}$ 

#### WE SHOULD ONLY USE THE COMPLETING THE SQUARE METHOD IF:

**Group Practice:** Solve for x.

Unit 9 - Quadratic Equations

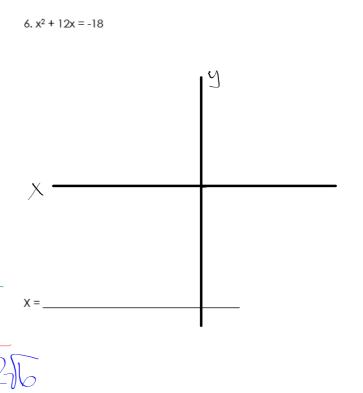

Notes

# Day 7 – Finding the Vertex by Completing the Square

**Think About It:** In Unit 8, you learned to find the vertex of an equation in standard form by finding the x-value of the vertex using x = -b/2a. Today, you are going to learn how to use completing the square to find the vertex.

Take a look at the graph and conversion to standard form. How would you go from  $g(x) = x^2 + 8x + 11$  to  $g(x) = (x + 4)^2 - 5$ ?

$$g(x) = (x+4)^2 - 5$$

$$g(x) = (x+4)^2 - 5$$

$$g(x) = (x+4)(x+4) - 5$$

$$g(x) = x^2 + 8x + 16 - 5$$

$$g(x) = x^2 + 8x + 11$$

Vertex: (-4, -5)

#### Finding the Vertex by Completing the Square

To finding the vertex from standard form, we are only going to focus on the right side of the equation. Take a look at the following example from above, but this time, we are going from standard to vertex.

Steps	Reasoning/Justification
$y = x^2 + 8x + 11$	Original Equation
x <sup>2</sup> + 8x + = -11 +	Move the constant term to the right side
x <sup>2</sup> + 8x <u>+ 16</u> = -11 <u>+ 16</u>	Determine the missing "c" term
$(x + 4)^2 = 5$	Simplify the right side and determine the binomial squared on the left side.
$y = (x + 4)^2 - 5$	Move the term on the right back to the other side and set the equation equal to y.
Vertex: (-4, -5)	Name your vertex.
